

PEANUT ALLERGY SUBLINGUAL IMMUNOTHERAPY (SLIT) RESEARCH STUDY

Principal Investigator: Dr. Stephanie Leonard
Director, Food Allergy Center at Rady Children's Hospital San Diego

What

The study is called ALLIANCE. The purpose is to look at whether using a daily investigational tablet containing peanut protein that dissolves under the tongue can decrease the risk of an allergic reaction if your child is accidentally exposed to peanuts.

Who

Children ages 4-17 years with a peanut allergy may be eligible.

Pay

Compensation is available.

If interested in learning more about the ALLIANCE study, please contact our research coordinator:
